

Support PIN for Client Verification - WHMCS

[Here you can buy the module](#)

Description

Easy verification of your clients via PIN code. Client generate his pin at the customer panel and give the pin to your live chat or telephone supporter so they can identificate the customer and verify that it is a valid request.

At configuration you can specificate which employees have access to all generated pins. If an employee is not specificated he needs to use the search mask to check the pin.
