

# Usage

Open **Setup Email Template** and click on the mail where you want to add the Auto Login Link.  
At the WHMCS Mail Editor you can add `&{$modautologin}` to existing links or create a new link with `&{$modautologin}` at the end.

## URL Examples:

- `{$whmcs_url}viewinvoice.php?id={$invoice_id}&{$modautologin}`
- `https://your-whmcs.com/clientarea.php?{$modautologin}`
- `{$ticket_link|strip_tags:false}&{$modautologin}`

If you use a mail variable, which is already sent as a hyperlink by default, please add "strip\_tags:false" to the WHMCS mail variable. This will remove the hyperlink from the inbuilt WHMCS variable.

Please take a look at the last example above.

**Note:** Replace `&` with `?` if there are no parameters before the Auto Login Link (like demonstrated in the examples above).
