

Create Webex Webhook

The screenshot shows the Cisco App Hub interface. On the left is a sidebar with various categories like 'Webex Meetings', 'Webex Teams', 'Developer Tools', etc. The main content area has a search bar at the top. Below it, there's a section for 'Incoming Webhooks' with a search bar and a list of webhooks. One webhook is visible with the name 'WHMCS' and 'Room: WHMCS'. A red box highlights the 'Add' button and the 'Webhook name' and 'Select a space' fields. A red arrow points from the left sidebar to the 'Add' button.

Webhook name

Select a space

[Add](#)

Incoming Webhooks

Webhook Name	Room
WHMCS	Room: WHMCS

To use the module, you need to create a new Incoming Webhook:

- Open the App Store at apphub.webex.com
- Search for **"Incoming Webhook"**
- Select a Team and click on **"Connect"**
- Scroll down to the end and add the webhook into a channel
- Save the URL and copy it into the notification module at WHMCS

Now you can setup your [notification rules](#) at WHMCS.
