

Sidebar Widget

After the installation, a sidebar widget can be configured, via which the customer can see the current support PIN or create a new one. At the module configuration it is possible to define exactly on which sites the widget should be visible.

Default values are: "addcontact,changePW,contacts,creditcard,details,emails,security,services,, "

Modification of the Sidebar Widget Design

It is possible that you make adjustments of the sidebar. This can be useful if you have a custom WHMCS design. To edit the output of the sidebar, open the file /modules/addons/supportpin/clientareaSidebarTemplate/<file>.php.

You can also create your own template by creating a new .php file in the "clientareaSidebarTemplate" directory. As the files in this directory are not encrypted, you can copy and adjust them to your needs.

After saving, the newly created template will be available for selection in the module configuration.

» Support PIN

Customers can create a Support PIN for verification

Time in Hours	<input type="text" value="24"/>	How long should the PIN be valid?
Start Number	<input type="text" value="10000"/>	Define the start number for the PIN
