

Usage

Open **Setup Email Template** and click on the mail where you want to add the Auto Login Link.

At the WHMCS Mail Editor you can add **&{\$modautologin}** to existing links or create a new link with **&{\$modautologin}** at the end.

URL Examples:

- {\$whmcs_url}viewinvoice.php?id={\$invoice_id}&{\$modautologin}
- https://your-whmcs.com/clientarea.php?{\$modautologin}
- {ticket_link|strip_tags:false}&{\$modautologin}

If you use a mail variable, which is already sent as a hyperlink by default, please add "strip_tags:false" to the WHMCS mail variable. This will remove the hyperlink from the inbuilt WHMCS variable.

Please take a look at the last example above.

Note: Replace & with ? if there are no parameters before the Auto Login Link (like demonstrated in the examples above).
