

# Microsoft Teams For WHMCS

[Here you can buy the module](#)

## Description

This module complements the WHMCS notification system to send messages via Microsoft Teams. The module is fully integrated into the WHMCS notification system so that all functions can be used.

The screenshot displays a Microsoft Teams chat window. At the top, the header bar shows 'Deploymentcode > General ...'. The left sidebar contains 'Conversations', 'Files', and 'Wiki'. The main chat area shows two messages from 'WHMCS' at 1:38 AM. Each message is a notification for 'Invoice #193' with the text 'An invoice has been paid.' Below this, a table lists the invoice details:

Invoice #193	
An invoice has been paid.	
Client	Michael Jemand
Due Date	23/03/2019
Total	\$100.00 USD
Payment Method	Mail In Payment
Status	Paid

Each notification includes an 'Open in WHMCS' button. The chat interface also features a 'Reply' button and a bottom input area with the text 'Start a new conversation. Type @ to mention someone.'

**For each configured notification, the following additional options can be set:**

- Message Color
- Replace the default webhook URL with a custom webhook URL to post messages in different channels
- Customize the primary display message shown in the notification
