To send a formatted message, make an HTTP POST to the URL and provide the message body (in Markdown format) in the markdown field:

```
curl -X POST -H "Content-Type: application/json" \
-d '{"markdown": "This is a formatted message from a Cisco Webex Teams incoming webhook."}' \
"https://api.ciscospark.com/v1/webhooks/incoming/<incoming_webhook_url>".
```

See our Webex Teams for Developer documentation about [formatting messages](#) for more examples of how you can create richly-formatted messages in Webex Teams.

Webhook name

Select a space

Add

Incoming Webhooks

| | | |
|-------|-------------|---|
| WHMCS | Room: WHMCS | ▼ |
|-------|-------------|---|

To use the module, you need to create a new Incoming Webhook:

- Open the App Store at apphub.webex.com
- Search for **"Incoming Webhook"**
- Select a Team and click on **"Connect"**
- Scroll down to the end and add the webhook into a channel
- Save the URL and copy it into the notification module at WHMCS

Now you can setup your [notification rules](#) at WHMCS.
