

Jabber Notifications For WHMCS

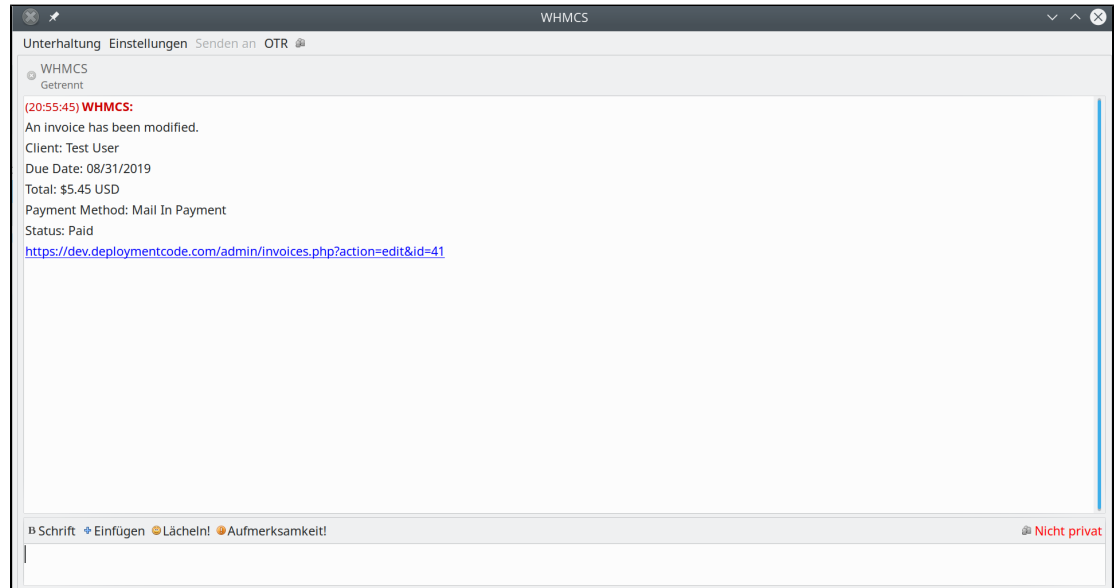

[Here you can buy the module](#)

Description

This module complements the WHMCS notification system to send messages via Jabber / XMPP. The module is fully integrated into the WHMCS notification system so that all functions can be used.

For each configured notification, the following additional options can be set:

- Customize the primary display message shown in the notification
- Different recipients can be configured for each notification, which overwrites the global setting.
