

Test Automated Invoice Cancellation

If you activated the automated invoice cancellation you may want to check first which invoices would get cancelled.

The module does have a test mode integrated. To run a test, please process as follows:

- Open an invoice at the WHMCS Admin
- Click on "View as Client"
- Add the parameter `&testAutocancellations=1` at the end of the URL.

The result should be: whmcs.yourdomain.com/viewinvoice.php?id=12&view_as_client=1&testAutocancellations=1

After calling the URL, the cancelled invoices are logged to your WHMCS Activity Log **Utilities** **Logs** **Activity Log**.

You need to be logged in as admin, otherwise, the test mode does not execute.
