

Custom Field Creation

i This step is optional. If you do not create a Custom Client Field, the module will always use the male salutation.

First you need to create a Custom Field, so the module can look up the correct salutation for the client.

1. Navigate to **Setup Custom Client Fields**
2. Create a new Dropdown Field. Choose the fields name and values as you wish. The result should look like on this screenshot:

This is where you configure custom fields which appear in the clients profile.

Field Name	<input type="text" value="Gender"/>	Display Order	<input type="text" value="0"/>
Field Type	<input type="text" value="Drop Down"/>		
Description	<input type="text"/>	The explanation to show users	
Validation	<input type="text"/>	Regular Expression Validation String	
Select Options	<input type="text" value="Male,Female"/>	For Dropdowns Only - Comma Separated	
List			
<input type="checkbox"/> Admin Only <input checked="" type="checkbox"/> Required Field <input checked="" type="checkbox"/> Show on Order Form <input type="checkbox"/> Show on Invoice <input type="button" value="Delete Field"/>			

3. The options **Required Field** and **Show on Order Form** are optional. If you do not want to let the clients select their gender, then do not check that options.
That could make sense if your clients are mostly males or womens.
