Gateway Configuration Explained

Display Name

The gateway name which will be shown on the invoice page.

Account ID

Your sepa.net account ID.

Secret Key

The secret key which you receive from sepa.net.

Productname

Enter your company or label name.

Domain

Enter your company or label domain name. This must not match with your WHMCS URL.

WHMCS Bot ID

Enter a Client ID which will notify you via a support ticket about payment failures. If you do not have an internal client which can be used for notification, create a new client and put the client ID at the field "WHMCS Bot ID".

API Test Mode

The test mode can be used to try functions of the module. If you tick this options, the module will communicate with the sepa.net test API.

Autopayment for new clients

You may want to manually review new sepa clients. If you deactivate this option, new invoices of the client will appear at the module admin page ("Addons" -> "SEPA.NET Payments") for manual review.
After you collect the first invoice of the client (click on execute), the client will be approved for the "Autopayment for existing clients" option.
If you disable this option and enable "Autopayment for existing clients" the invoice will be automatically collected.

Autopayment for existing clients

If you disable this option you need to collect every invoice manually at the module admin page ("Addons" -> "SEPA.NET Payments"). In most cases, you want that invoices gets collected automatically.
You may enable this option if you want to review every invoice before it gets collected.

Switch default gateway to SEPA

If activating this option the payment gateway of all services of the client will be changed to SEPA when he activate the SEPA Gateway. In most cases you want to have this feature enabled.

Force SEPA Gateway

If you activate this option all invoices of the client will get collected by SEPA. If the client orders a new service and choose e.g. "PayPal" at checkout, the module will override his selection and change the gateway to SEPA.
If autopayment option is enabled, the invoice will get collected instantly.

Type

SEPA.NET wants you to specificate what you sell. For Hosting Services select "service". If you sell hardware or other goods then select "sale".
