Support PIN for Client Verification - WHMCS

ⓘ **Here you can buy the module**

Description

Easy verification of your clients via PIN code. Client generate his supportpin at the customer panel and give the pin to your live chat or telephone supporter so they can identificate the customer and verify that it is a valid request. The PIN will expire after a configurable time frame.

In version 2.0 the appearance of the sidebar was completely revised, in the module configuration you can now choose between 2 different themes. You can also define on which pages the sidebar widget should appear. For example, on product pages, in the client profile, etc.

The module uses AJAX, the customer generates the PIN without reloading the page and the table in the admin area also updates automatically.
