Notifications & Automation

Activate DNS Management on link deletion

☒

When your staff removes a free domain from a product, the following option can activate the "DNS Management" setting. If your ACL group already allows access to the DNS Management, this setting will have no effect.

Activate Mail Forwarding on link deletion

☒

When your staff removes a free domain from a product, the following option can activate the "Email Forwarding" setting. If your ACL group already allows access to the Email Forwarding page, this setting will have no effect.

WHMCS Bot ID

2

via WHMCS bot

Set a Client ID which should be used for opening notification tickets. If you do not have a client which can be used for that, you need to create a new client. Only needed if Notifications are wanted.

Admin Notifications on Suspension / Terminate

☒

Creates an admin ticket if a product with free domain has been suspended or terminated. Useful to take note of free domain suspensions.

Admin Notifications on Un Suspension

☒

Creates an admin ticket if a product with free domain has been unsuspended.

On Product Suspend do

☐ Change Domain status to "Cancelled" and set Status back to "Active" if product get unsuspended

☒ Leave domain as it is. Just disable auto renew (Default)

Default ACL Group

Limited Access

When a free domain get activated, the following ACL group will be applied. The ACL groups can be used to limit client's management options at the WHMCS default product page.

Tools

Run Free Domain Import

Run Free Domain Import

Clicking this link will try to find and import all existing free domains and assign the domain to the related product.

Resync Domain Settings

Resync Domain Settings

If you have done changes which affects the module, you can force a manual consistency check.

The following tasks will be executed:

- Ensure that the correct client id is deposited in the module database
- Ensure that domain privileges matches with the settings of the ACL group (DNS Management / Email Forwarding)
- If you change the Free Domains setting at the WHMCS product configuration ("Renew as normal" <=> "Free renewal"), it will update the renewal pricing for the related domains.

This function is also automatically executed when the WHMCS cronjob gets executed and ensures the consistency of your system.
