

# Create a Slack Webhook

1. Install the 'Incoming WebHooks' App from the [Slack App Directory](#)
2. Select at **Post to Channel** any channel you wish. It doesnt matter what you select because the module will override the setting.
3. Scroll down to the end of the page and Copy the **Webhook URL**. You dont need to change anything at the settings.

**Incoming WebHooks**  
Send data into Slack in real-time.

Incoming Webhooks are a simple way to post messages from external sources into Slack. They make use of normal HTTP requests with a JSON payload, which includes the message and a few other optional details described later.

[Message Attachments](#) can also be used in Incoming Webhooks to display richly-formatted messages that stand out from regular chat messages.

 **New to Slack integrations?**  
Check out our [Getting Started](#) guide to familiarize yourself with the most common types of integrations, and tips to keep in mind while building your own. You can also [register as a developer](#) to let us know what you're working on, and to receive future updates to our APIs.

**Post to Channel**  
Start by choosing a channel where your Incoming Webhook will post messages to.

or [create a new channel](#)

Add Incoming WebHooks integration

By creating an incoming webhook, you agree to the [Slack API Terms of Service](#).
