

Mail Template

The module is a drop-in replacement for the default WHMCS reminder system. Therefore you are not forced to edit your mail templates. But to use all functions, you should do 2 things.

1. Open your Mail Template and set the subject to {\$Subject}. Using this variable, the mail subject will be handled by the module.
2. To use the Grouping Feature, add the following to your mail body if it does not exist already:

```
{foreach from=$expiring_domains item=domain}
{$domain.name} - {$domain.nextduedate} ({$domain.days} Days)
{/foreach}
```

This code works for single domain reminders and multiple domain reminders.

Subject: {\$Subject}

Font Family Font Size

```
{foreach from=$expiring_domains item=domain}
{$domain.name} - {$domain.nextduedate} ({$domain.days} Days)
{/foreach}
```
