

Auto Login From WHMCS Mail

[Here you can buy the module](#)

This module does provide Auto-Login Links for your WHMCS mails. You can modify your existing links by just adding "&{\$modautologin}" to authenticate the user automatically when he opens a link to an invoice or other pages.

The authentication does work for every WHMCS page (custom module pages too) and the module has a lot of configurable options to meet every use purpose.

This can be useful for let your clients show the invoice directly or to increase the ticket feedback rate.
