

Stop Clients Closing Tickets - WHMCS

[Here you can buy the module](#)

Description

With this module, it is possible to specificate tickets which should not get closed by the client.

This is useful when you create a ticket and you want ensure that he dont just close the ticket and about forget about it (e.g. abuse reports).

The module does not only remove the "Close" button - the module also recognize if the client tries to close the ticket via a manual HTTP request.
