

SEPA.NET for WHMCS - Gateway

[Here you can buy the module](#)

Description

You are looking for a solution with which you can make regular payments without great effort? [SEPA.net](#) handles your payments online using the direct debit procedure. Clients pay at [SEPA.net](#) with their bank account.

This does also work for recurring payments like for hosting products. The client just need to activate once the sepa gateway and all upcoming invoices will be charged from the provider side - without assistance of the client.

That increases the payment rate dramatically because there is no need for interaction from the client to get his invoice payed.
