Usage

When using the module, there is nothing special to note. It works exactly as you imagine it: A complete integration into the WHMCS Notification system.

In addition to the basic functions of WHMCS, the module offers 3 additional configurable settings:

- Custom Webhook URL to send messages to a different channel
- Customize the primary display message shown in the notification

Option: Custom Webhook URL

This option allows you to override the default webhook URL to post specific messages into other rooms.

Option: Custom Message

This option overrides the default text of WHMCS with your own text.

Edit Notification Rule ✕
