

Usage

When you open the administration page of the module, you will see all active admin logins listed. For each admin you can make various settings, which are explained here.

Admin Login Notify

Global IP Whitelist

Global IP Blacklist

Search

Status	Admin User	Countries	Block Logins	Settings
On	Manuel Foobar	✕ Austria	On	View Suspectve Logins
On	Andreas Berger	✕ Albania ✕ Angola	On	View Suspectve Logins

Showing 1 to 2 of 2 rows

Status

The module can be activated or deactivated individually for each admin account. If you set the status to "Off", the module will not perform a check at login.

Countries

Here you can add an unlimited number of countries from which a login should be possible.

Block Logins

If you set the slider to "On", logins from other countries will be blocked. After login, a white page is simply displayed by default. Using the custom error page feature, you can create your own page or redirect to the default login page so it looks like the login information is incorrect.

View Suspectve Logins

The button "View Suspended Logins" allows you to see which logins have been classified as suspicious. You can also see why the login appears suspicious and whether the login was blocked or not.

Suspicious Login History
