# Configurable VPS Resources

The module supports the use of Configurable Options to specify the resources during the ordering process. This allows your customers to book exactly the resources they need.

In the following
list you will find the option names which you have to create to use this feature:

Option name	Description
cpu	Amount of CPUs
diskspace	Amount of diskspace in GB
memory	Amount of memory in GB
additional_ips	Amount of additional IPv4 addresses

Please note that the amount of memory and storage space is defined in gigabytes, so it is easier for the customer to specify the amount if you use the quantity option.

Allowed Option Types

Every option supports all option types. The following table shows examples on how to set the values:

Option Type	Screenshot
Dropdown	Click
Quantity	Click
Radio	Click
Yes/No	Click

Friendly Display Names

The use of Friendly Display Names is supported, as with all other Configurable Options of the module. On the screenshot on the right you can see how to use the Friendly Names.
