Hide Products

ⓘ Module is available for purchase on this page

Description

This module provides you with a new setting option for customer products, which allows you to hide individual products from the Client Area. The module operates at client service level, so you can individually choose which of the client's products to hide.

This is especially useful if there are dependencies to other products but you do not want to display them in the clientarea.

Features

- Hide individual products from the clientarea
- Easy to use, just check / uncheck the box at the client service product page to hide / unhide products
- No template modifications
- PHP function for programmatically hiding products
- The product is hidden from all places in the client area:
    - Related services at submit ticket page
    - Amount of services in the product status filter
    - Table of products
    - Active products/services widget on clientarea home page
