

Modal Content Customization

If you want to change the default output of the logs, you can use an override file to create your own output:

1. Navigate into the directory `"/modules/addons/loginhistory/"`
2. Create the file `modalOutput.override.php`
3. Put following code into your file:

```
<?php

function loginhistory_modalOutput ($userid) {
    return "This will be shown in the modal";
}
```

After you have adjusted the content of the function `"loginhistory_modalOutput"` accordingly, the returned text will be displayed in the modal.
