

Mail Tracker For WHMCS

 [Purchase here](#)

 Please note that this system - like any other mail tracking system - cannot detect with 100% accuracy whether an email has been opened. If the recipient blocks external content, the module will not be able to detect whether the mail has been opened.

Description

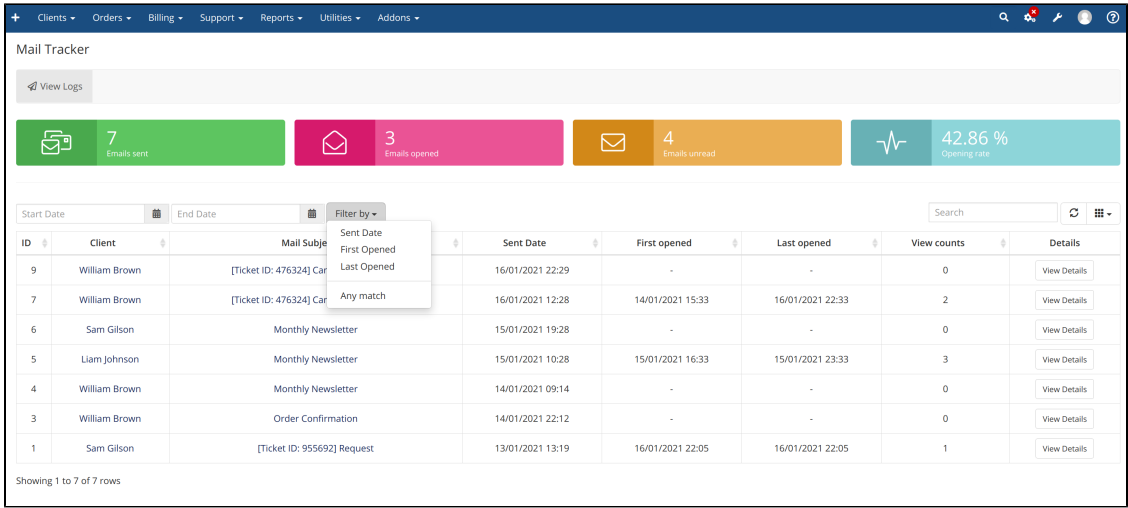

Mail Tracker For WHMCS automatically adds an invisible 1x1 pixel tracking code to your mails so you can determine the read status of your mails. The module records when the customer read the mail for the first time, how many times he read it and when he read it last. The module page offers you a unique insight with detailed information, statistics and various filtering options. Mails can be tracked either globally, or only specific email templates (for example, newsletters).

The module page is fully based on AJAX and all actions are performed without page reloads. This allows a very convenient evaluation of the statistics.

Features

- Easy setup. You only need to add one variable to your email template.
- Mails can be tracked globally or per email template.
- [AJAX based module page to analyse the statistics.](#)
- Read status can be shown on the "Summary" profile page tab (optional).
- Read status can be shown on the "Emails" profile page tab (optional).
- IP logging can be disabled.
- IP addresses can be pseudonymized.
- Logs can be deleted after a configurable number of days.

» Mail Tracker

1.0.0Deploymentcode.com

Detect if a mail has been read by your customer.

License Key

Key from deploymentcode.com

Show read status at summary profil page☒ Enable this option to show the read status in the user profile tab "Summary".

Show read status at emails profil page☒ Enable this option to show the read status in the user profile tab "Emails".

Disable IP logging☐ Enabling this option will disable logging of IP address from which the e-mail was opened.

Pseudonymize IP☐ This option sets the last octet of IPv4 addresses to 0. At IPv6 addresses, this option will zero the last 80 bits.

Keep read mails logs for

days.

The decisive factor is the last read date. Leave empty to disable.

Keep unread mails logs for

days.

Leave empty to disable.

Default number of entries in the overview table

100

By default, the last 100 entries are displayed, other entries are paginated.
