

Usage

In order for the module to perform tracking, please add the code "{dpl_mailtracker}" to your email template.

Some hints:

- You can also use the tracking tag when you use the "Email Client" function.
- As Blesta currently does not support global custom tags, you need to repeat this step for each mail template.

The screenshot shows the Blesta email template editor interface. At the top, there's a section for 'Available Tags' listing various placeholders like {contact.first_name}, {contact.last_name}, {invoices}, {autodebit}, {client_url}, {payment_account.first_name}, {payment_account.last_name}, {payment_account.account_type}, and {payment_account.last4}. Below this, the editor is split into 'HTML' and 'Text' tabs, with 'Text' being the active tab. A rich text editor toolbar is visible above the main text area. The main text area contains a draft email template for an invoice notification, including a greeting, a paragraph about the invoice, an invoice number placeholder, conditional logic for autodebit, a 'Pay Now' button, and a closing line. A red rectangular box highlights the text '{dpl_mailtracker}' at the bottom of the main text area. Below the text area, there are sections for 'Signature' (with a dropdown menu currently set to 'Billing'), 'Include Any Attachments' (checked), and 'Enabled' (checked).
