

Module Options

The module offers various setting options, which are described below.

23. Klarna Checkout (Deactivate) 

Show on Order Form	<input checked="" type="checkbox"/>
Display Name	<input type="text" value="Klarna Checkout"/>
License Key	<input type="text" value="License Key from Deploymentcode.com"/>
API URL	<input type="text" value="EU Production (https://api.klarna.com/)"/>
API Username (UID)	<input type="text" value=""/>
API Password	<input type="password" value=""/>
Statement Description	<input type="text" value="Invoice #{{invoiceid}} - {{companyname}}"/>
Convert To For Processing	<input type="text" value="None"/>
<input type="button" value="Save Changes"/>	

License Key

You will receive a license key from us, which you have to enter here.

API URL

Depending on which country you are in, the Klarna API URL will be different. You can select the appropriate endpoint via this dropdown. You can also choose between playground API (for testing) and the production API.

API Username & API Password

You will receive the API data from Klarna. We have instructions on how to do this here: [Create Klarna API Credentials](#)

Statement Description

The value defined here will be displayed on the customer's account statement. Besides static text, the following variables are supported:

- {{invoiceid}}
- {{companyname}}
