

Create Klarna API Credentials

To create API credentials for WHMCS, login into your Klarna Account and open the page "Settings" "Klarna API Credentials".

On the API credentials page click the button "Generate new Klarna API credentials" and insert the username and password at the WHMCS gateway configuration page.

The screenshot shows the Klarna API Credentials management page. On the left, there is a sidebar with various navigation options: Home, Orders, Settlements, Point of Sale, Branding, Logistics, Logs, On-site messaging, Marketing, and Users. The 'Settings' option is highlighted with a red arrow pointing to it. The main content area is titled 'Manage Klarna API Credentials' and displays a table of existing credentials. The table has columns for Username (UID), Password, Created on, and Status. A prominent red arrow points to the 'Generate new Klarna API credentials' button, which is located above the table. The table shows five rows of data, with the last row being partially visible. The top right corner of the main content area shows '1-5 of 5' and navigation arrows.
