

# Dedicated Server Manager - NOC-PS for WHMCS

## NOC-PS For WHMCS Documentation

If you have questions, please contact [support@deploymentcode.com](mailto:support@deploymentcode.com)

[Watch here a demo video and view screenshots](#)

With NOC-PS For WHMCS, your customers can manage dedicated servers and virtual servers using the [NOC-PS server provisioning system](#). The module provides hassle-free management of servers for hosters and customers. This module supports auto setup for new orders and is compatible with WHMCS configurable options. Configuration options values for each dedicated server can be set or changed using the [server manager](#), the module will find the matching dedicated server and assign it to the client if auto provisioning is enabled.
