

IP Control: Default IPs

At the file `"/modules/servers/freenas/ipconfig.php"` you can specify which IPs should be allowed by default for

- NFS
- iSCSI
- Samba

The IPs listed in this file will be allowed when a service gets activated.

Content

```
function freenas_setAllowedIPs ($pid) {  
    return array (  
        'nfs' => array ('1.2.3.4'),  
        'cifs' => array('1.2.3.4'),  
        'iscsi' => 'ALL',  
    );  
}
```

The file is open for modifications, so you can integrate your own code to return other IPs based on the service id.
