

NFS Server Configuration

NFS Configuration

Open **Control Services** from the Services Menu on the left side, next click on the wrench icon at NFS and set the following values:

- Allow non-root mount: On
- Number of servers: 16 (adjust to your needs. The FreeNAS default value is too low)

Settings

Number of servers: ⓘ

Serve UDP NFS clients: ☐

Bind IP Addresses: ☒ 185.185.24.5 ⓘ

Allow non-root mount: ☒ ⓘ

Enable NFSv4: ☐

NFSv3 ownership model for NFSv4: ☐ ⓘ

Require Kerberos for NFSv4: ☐

mountd(8) bind port: ⓘ

rpc.statd(8) bind port: ⓘ

rpc.lockd(8) bind port: ⓘ

Support >16 groups: ☐ ⓘ

Log mountd(8) requests: ☐ ⓘ

Log rpc.statd(8) and rpc.lockd(8): ☐ ⓘ

Click on **"Ok"** to save the changes and activate the service using the **"Start now"** button. The last step is to checkmark the **"Start on boot"** box
