

Access Control Lists

The ACL group defines which access privileges your client have.

ACL Groups on product configuration

You can set a default ACL group on the product configuration page. This group will be used for new created accounts.

ACL Groups on the client product admin page

You can override the default ACL group on the client product page to set individual permissions.

ACL Name	ACL Status
ACL Tools	
Group Name	test
Shell Type	/bin/csh
Manage FTP	ON
Manage NFS	ON
Manage iSCSI	ON
Manage CIFS	ON
Manage IP Control	ON
Manage SSH	ON

Existing ACL groups can also be edited, at the dropdown "ACL Tools" you can find the option for editing existing ACL groups.
Please note: If you edit an existing group, the change will be applied to all customers using this group.
