

# Execute NOC-PS Profile on Termination

If a server is terminated due to payment issues or cancellation, the module can automatically start a NOC-PS profile of your choice. For example, the profile can delete the data on the server. NOC-PS offers a profile by default called "Wipe hard disks" for that.

The function can be activated in the [module settings](#) under the option "Start NOC-PS Profile on Terminate".

The function is only executed if the client product is a dedicated server. For a VPS, this is not necessary because the server is deleted during termination.

Start NOC-PS Profile on Terminate

Wipe hard disks

▼

On termination, the server will start the selected NOC-PS profile.
