

Module Options

The module offers various setting options, which are described below.

The screenshot shows the 'Stripe Credit Card Checkout' settings page. It includes a header with a plus icon and the module name, and a top-right corner with a checkmark icon. The settings are organized into a form with the following fields and options:

- Show on Order Form:** A checkbox that is checked.
- Display Name:** A text input field containing 'Credit Card Checkout'.
- License Key:** A text input field with the placeholder text 'License Key from Deploymentcode.com'.
- Public Key Token:** A text input field.
- Private Key Token:** A text input field with masked characters (dots).
- Webhook Secret Signature:** A text input field with masked characters (dots).
- Statement Description:** A text input field containing '{{companyname}} - #{{invoiceid}}'. To the right of the field is a note: 'This does appear on your client statement. {{invoiceid}} variable must be contained.'
- Create client at Stripe:** A checkbox that is checked. Below it is a note: 'Activate to create a new client in Stripe for each payment session. Payments will be linked to clients. The option does not re-use existing clients.'
- Submit client mail address to Stripe:** A checkbox that is checked. Below it is a note: 'Activate this setting to automatically provide the customer's email address to Stripe. This can eliminate the need for the customer to manually enter their email address on the checkout page.'
- Don't verify received payment amount:** An unchecked checkbox. Below it is a note: 'By enabling this option, payments are marked as fully paid regardless of returned amount from Stripe. Only useful when currency conversion causes discrepancy between WHMCS and Stripe. Fees are still converted, and the setting is skipped if the payment amount not converted. Use only if currency conversion issues arise.'
- Convert To For Processing:** A dropdown menu currently set to 'None'.

At the bottom of the form are two buttons: 'Save Changes' (blue) and 'Deactivate' (red).

License Key

You will receive a license key from us, which you have to enter here.

Public Key Token / Private Key Token

You find the keys on this page: <https://dashboard.stripe.com/apikeys>

Webhook Secret Signature

You find the webhook secret signature on this page: <https://dashboard.stripe.com/webhooks>

Statement Description

The value defined here will be displayed on the customer's account statement. Besides static text, the following variables are supported:

- **{{invoiceid}}** - **REQUIRED FIELD. A space character must be in front of the variable (i.e., you can't write {{invoiceid}} at the beginning of "Statement Description").**
- **{{companyname}}**

The statement description must be between 5 and 22 characters long. If your company name is long, you should replace the **{{companyname}}** variable with a custom text.
